inhealthcare

# Services are centred around patient convenience and choice

# The aim is that multiple conditions are supported by a single system

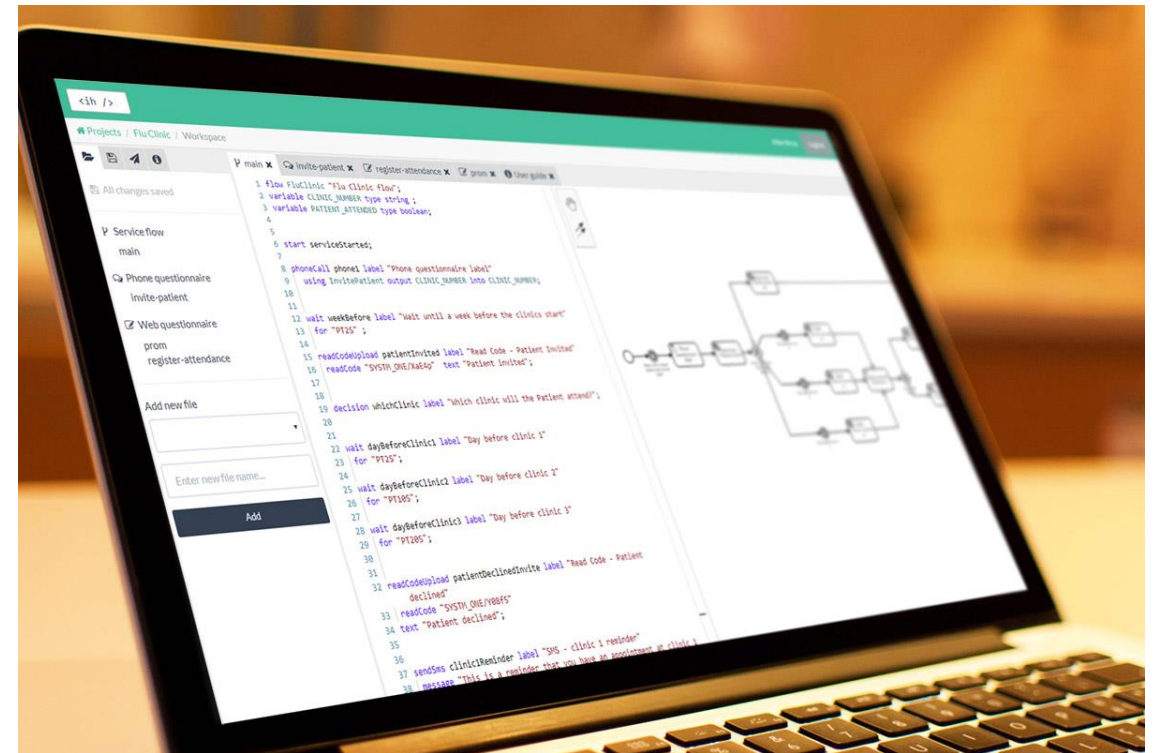

HealthCall

# Using the Inhealthcare toolkit Health Call can build digital services for our people

The Toolkit allows care Health Call to create our own digital services, at speed and at low cost. With over 50 NHS staff now trained on the Toolkit, Health Call is creating a community of experts.

## Benefits of the Toolkit for Health Call:-

- Digital services can be created at speed
- Digital services can be developed at a fraction of the cost of traditional software development methods
- Innovation can be spread across trusts, reducing time and cost of developing new services
- Secure multi-channel connections means services can be used by everyone
- Integration with existing clinical systems removes expensive and time consuming development work

Pils 1 mg							
Pils 2 mg							
Pils 5 mg	2 1/2	0	0	2 1/2	2 1/2	2	1 1/2
Total mg	2 1/2	0	0	2 1/2	2 1/2	2	1 1/2
Closest	Sun	Mon	Tue	Wed	Thu	Fri	Sat

08:00 40Mg

Dose decreased by 50% Dose: 12.00 w

**4S DAWN**  
CLINICAL SOFTWARE

The service can integrate directly with 4S-DAWN. This means that clinic staff can dose from within their existing system, or from the Inhealthcare portal if the clinic uses a different decision support system

**Warfarin Clinic**

Using either an automated phone call or on-line submission, the patient provides their INR reading, current warfarin dose, and questions around bleeding and medication

The service then informs the patient of their warfarin dose and the date of their next INR test

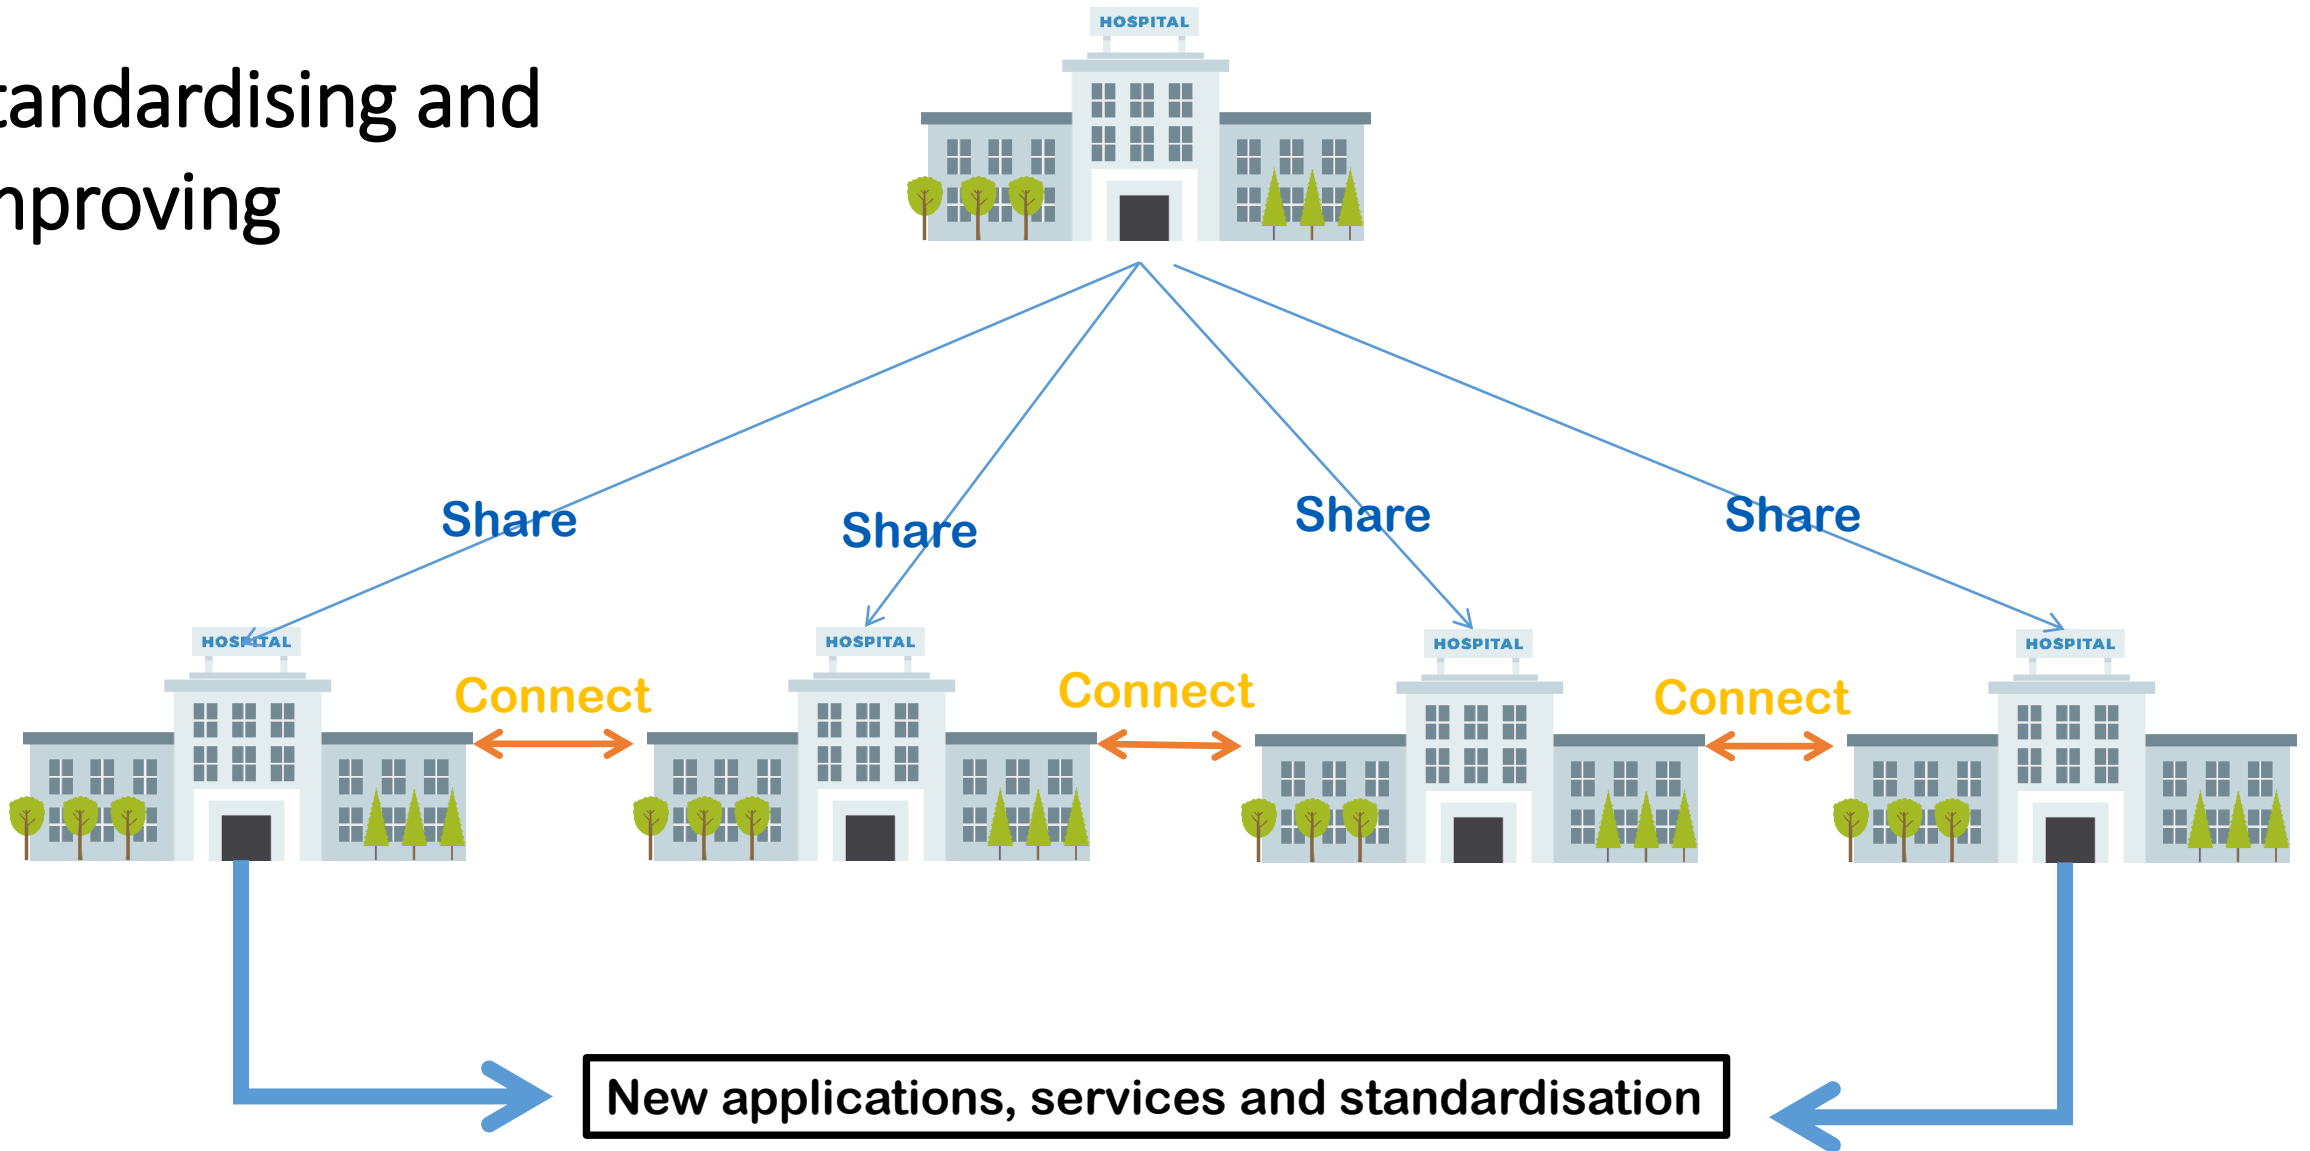

Patient self-tests INR at home on agreed date

Patient follows new dosing regime and notes date of next test
