Antenatal Optimisation Toolkit

Antenatal Optimisation for Preterm Infants less than 34 weeks: A Quality Improvement Toolkit

Optimal Cord Management Toolkit

Optimal Cord Management in Preterm Babies: A Quality Improvement Toolkit

Building Successful Perinatal Optimisation Teams A Toolkit to support delivery of the Perinatal Optimisation Pathway February 2023

Maternal Breast Milk Toolkit

Optimising Maternal Breast Milk for Preterm Infants: A two-part Quality Improvement Toolkit

Normothermia Toolkit Improving Normothermia in Very Preterm Infants: A Quality Improvement Toolkit. Reliable delivery depends on a strong teamworking culture, high quality communication habits and pursuit of common goals within perinatal teams, supported by quality improvement.

This resource will enable Perinatal Optimisation Teams to assess their quality context, team interactions, functioning and ways of working and to use this assessment to provide intelligence about culture and readiness for change.

Start with a team...

Referring and receiving unit perinatal team Transport Teams Transport Coordination service staff Ambulance staff Triage and clinic staff Community midwives General Practitioners Pharmacists Ultrasonographers Housekeeping team Clerical and administrative staff Theatre staff Maternity/health care assistants Nursery nurses Infant feeding team Peer support workers Psychological practitioners and other mental health support Other Allied Health Professionals

- One single perinatal optimisation team with a single shared vision
- Also consider:
 - PTB Leads
 - Maternity and Neonatal Safety Champions, Trust Board Champions

Making improvements...

Maternity and Neonatal

Where are you now?

Helen Brown Workstream Lead for MatNeo Optimisation and Deterioration Y&H

Viv Dolby MatNeo Deterioration Project Manager Y&H

Where are you now...

Roles & Relationships

- Core Team
 - Understanding relationships with other teams

- Ask questions to understand which is strong & effective?
- How to strengthen working relationships?

Other considerations...

- Identify preterm birth leaders & current workstreams?
- Do they have capacity & resources to extend role?
- QI resource for each lead appropriate for size of unit?
- Shared goals around PTB & PT outcomes
- Use of QI methodologies to embedded optimisation interventions
- Process to review implementation & share learning
- Develop positive interactive culture at all levels Inc. HR etc
- Training: Identify training gaps
 - QI, in leadership, clinical skills and in advanced communication?

Safe & person-centred pathways

- Person centred maternity & neonatal care
- Clear priority for safety & improvement national & QI programmes
- Respectful & safe communication
- Active listening
- Evidence based information > informed & supported decisions
- Psychologically safe & compassionate environments
- Culture of openness, listening > 2 way process
- Value of formal use of service users

Psychological Safety

How to ensure a safe space that encourages open dialogue

Engagement in audit, benchmarking and research

Data Sources – local, regional and national

Data sources - regional

Early Intervention (<34/40)

Health Data Research Innovation Gateway

The HDR Innovation Gateway (The Gateway) is the UK's unified portal to discover and request access to health datasets.

The Gateway provides a search engine and platform to discover, manage, enhance and request access to health datasets, tools and resources for vital research.

- Data Utility Framework highlights how datasets can be used
- Data Use Register shows how, by whom and why data have been reused

Trusted Research Environment integration – future capabilities to facilitate ease of working across datasets and research environments

Phenotype Library – the largest national library of algorithms, metadata and tools for extracting health-relevant information health records

Health Data Research

Gateway functions

1	1000	
100	-	
1000	\mathbf{u}	
	1000	.,/

Data discovery - list and explore datasets with standardised metadata

Cohort Discovery tool – remote secure query across multiple datasets to find groups of patients with specific characteristics

Collections – curated, centralised lists of resources available within the Gateway for ease of use

Data Access Request Management – manage and standardise responses to data access requests in a way that keeps people, projects, settings, data and outputs safe

HDR UK run regular webinars and events. To stay informed, sign up for the HDR Innovation Gateway monthly newsletter www.hdruk.ac.uk/gatewaynewsletter

Encouraging research culture

Quality Improvement

Data recorded as part of clinical care contributes to local, regional and national audits, service evaluation and benchmarking as well as commissioning and research, to inform improvements in neonatal care and service organisation/delivery.

Establishing capability and capacity for quality improvement requires:

- Adequate resource (including time)
- Trained in improvement science methodology which includes:
- Quality planning,
- Defining the problem,
- Developing a shared purpose,
- Planning and implementing changes,
- Test and measuring improvement,
- Implementing, embedding and sustaining change.

capacity: training: planning: study: share

Communication with women

Paula Elliott, Programme Manager

National

15 steps for maternity toolkit inspired by the comment:

"I can tell what kind of care my daughter is going to get within 15 steps of walking on to the ward"

This comment highlights how important it is to understand what good quality care looks and feels like from the perspective of the people who experience that care. The toolkit aim is to explore different healthcare settings through the eyes of those who use them and their relatives/carers.

15 Steps small teams can be created by utilising the local Maternity Voices Partnership to provide service user/user rep, plus a partner, family member, along with clinical representation from midwifery & obstetrics, commissioner or Trust Board member. The small teams access local maternity settings where care is provided to get a 'feel' for the space, using all their senses to reflect on their first impressions and consider the impact of this experience. The small teams use the 15 Steps for Maternity Observation Guides ensuring their observations are considerate of a wide variety of service users who access local maternity care, with special care taken to consider the needs of seldom heard voices and minority groups.

<u>15-steps-maternity-toolkit-v9-1.pdf (england.nhs.uk)</u>

15 Steps

Briefing – Participants gather in a room for a short briefing to hear where the 15 steps will take place

Provide a verbal report of findings to the MNVP meeting. Include positive aspect to celebrate & areas for improvement

Welcoming & informative; Safe & clean; friendly & personal; organised & calm

Small teams of 3 people gather to review areas in which you currently do not work

Findings – consider any positive aspects you would like to share immediately

National - PCSP

PCSP

All women have a plan for their maternity care, but personalised care and support planning goes much further. PCSP - a series of facilitated conversations in which the person actively participates to explore the management of their health and wellbeing within the context of their whole life and family situation so that all considerations that may impact on safe care are accounted for. It is developed - following an initial holistic assessment of a woman's health and wellbeing needs. The woman works together with her healthcare professionals to complete this assessment. The agreed personalised care and support plan should set out the decisions she makes about the care and support she wants to receive, taking into account the information above.

Personalised care and support planning guidance

Development of PCSP

Other bespoke tools – facilitating women and families to make informed choices and providing standardised and comprehensive information with explanation of risks, benefits and alternatives for specified clinical situations and interventions.
